

1: The two tubes are rotary connected

2: The lamp body is locked onto the tube after installing a round plate on the base. Place the gear spacer and tighten it with a nut.

3: After the lamp body is installed, connect the positive wire of the LED strip to the negative terminal, and connect the remaining two wires to the power wires.

4: Each tube is fitted with glass, a frosted light guide tube, a flat cover, a lamp cup cover, and secured with iron fittings.
